No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      score:

New factor VIIa antagonist peptide for research, diagnostic, therapeutic and prophylactic methods, inhibits FVII/FVIIa mediated processes and blocks initial events of blood coagulation.

Claim 1; Page 49; 80pp; English.

This invention relates to peptides which act as antagonist of Factor VIIa (FVIIa). FVIIa is a trypsin-like serine protease blood coagulation

```
factor. FVIIa antagonist peptides are useful for inhibiting FVIIa activity in the presence of a tissue factor (TF) and for treating a TF/FVIIa mediated disease or disorder in a host. Diseases which can be treated include chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders such as deep venous thrombosis, arterial thrombosis, stroke, tumour metastasis, thrombolysis, arteriosclerosis and restenosis following angioplasty, acute and chronic indications such as inflammation, septic shock, septicaemia, hypotension, cardiopulmonary bypass surgery, hereditary angioedema, adult respiratory distress syndrome (ARDS), disseminated intravascular coagulapathy (DIC) and other diseases like inflammatory disorders. The antagonist peptides are also useful in research, and for disorders. The antagonist peptides prophylactic purposes. The present sequence represents a factor VIIa antagonist peptide of the invention
                                                                                                                                                                                                                                                                                                                                                ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to evaluating the efficacy of molecule against a target population including a pest strain resistant to first toxin. The method involves determining pest strain susceptible to the first toxin, selecting strain resistant to first toxin, and evaluating the efficacy of resistant strain molecules to determine second toxin that is more
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Evaluating the efficacy of molecule against target population including toxin-resistant pest strain, by determining susceptible pest strain, selecting resistant strain, and evaluating efficacy of resistant strain

               susceptible strains co-exist in the target population. The method is useful for evaluating the efficacy of molecule against a target population comprising pest strain resistant to first toxin, e.g. insect population, mammalian population, plant population, animal population, or virus population. The efficacy of molecules to kill unwanted resistant organisms is increased. Sequences ABR82336-49 represent A-series peptides that inhibit the activation of factor X
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to peptide antagonists of tissue Factor VIIa (trVIIa) and a method of inhibiting FVIIa activity by contacting FVIIa with the peptide in the presence of tissue factor and under conditions that allow binding of the compound to FVIIa to occur. The peptides are useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, such as deep venous thrombosis, arterial thrombosis, stroke, atherosclerosis, or septicaenia. The present sequence represents a tFVIIa peptide antagonist of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New peptide, useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, such as deep venous thrombosis, arterial thrombosis, and

This invention relates to peptides which act as antagonist of Factor VIIa (FVIIa). FVIIa is a trypsin-like serine protease blood coagulation activity in the presence of a tissue factor for inhibiting FVIIa activity in the presence of a tissue factor (TF) and for treating a crivity in the presence of a tissue factor (TF) and for treating a CT FVIIA mediated disease or disorder in a host. Diseases which can be tracted include chronic thromobembolic diseases or disorders associated with fibrin formation including vascular disorders such as deep venous thrombosis, arterial thrombosis, stricke, tumour metastasis, thrombolysis, chrombosis, arterial thrombosis, sollowing angioplasty, acute and chronic condictions such as inflammation, septic shock, septicaemia, hypotension, cardiopulmonary bypass surgery, hereditary angioedema, adult respiratory distress syndrome (ARDS), disseminated intravascular coagulapathy (DIC) and other diseases like inflammatory disorders. The antagonist peptides are also useful in research, and for diagnostic, therapeutic and prophylactic purposes. The present sequence represents a factor VIIa antagonist peptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New factor VIIa antagonist peptide for research, diagnostic, therapeutic and prophylactic methods, inhibits FVII/FVIIa mediated processes and
                                                                                                                                                                                                                                                                                              chronic thromobembolic disease, fibrin formation, vascular disorder; deep vein thrombosis, arterial thrombosis, stroke, metastasis, thrombolysis, arteriosclerosis, restenosis, inflammation, septic shock;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                        factor VIIa, FVIIa, blood coagulation factor; inhibitor; mobembolic disease; fibrin formation; vascular disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

The invention relates to peptide antagonists of tissue Factor VIIa (tFVIIa) and a method of inhibiting FVIIa activity by contacting FVIIa with the peptide in the presence of tissue factor and under conditions that allow binding of the compound to FVIIa to occur. The peptides are useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, such as deep venous thrombosis, arterial thrombosis, stroke, atheroscierosis, or septicaemia. The present sequence represents a tFVIIa peptide antagonist of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New peptide, useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, such as deep venous thrombosis, arterial thrombosis, and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to evaluating the efficacy of molecule against a target population including a pest strain resistant to first toxin. The method involves determining pest strain succeptible to the first toxin, selecting strain resistant to first toxin, and evaluating the efficacy of resistant strain with molecules to determine second toxin that is more toxic to resistant strain than to susceptible strain. The method is susceptible strain. The method is useful for evaluating the efficacy of molecule against a target population comprising pest strain resistant to first toxin, e.g. insect population, mammalian population, plant population, animal population, or virus population. The efficacy of molecules to kill unwanted resistant organisms is increased. Sequences ABRR2136-49 represent A-series peptides that inhibit the activation of factor X
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Evaluating the efficacy of molecule against target population including toxin-resistant pest strain, by determining susceptible pest strain, selecting resistant strain, and evaluating efficacy of resistant strain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

                                                                                                                                                          The invention relates to peptide antagonists of tissue Factor VIIa (tFVIIa) and a method of inhibiting FVIIa activity by contacting FVIIa with the peptide in the presence of tissue factor and under conditions that allow binding of the compound to FVIIa to occur. The peptides are useful for preventing or treating chronic thromboembolic diseases or such as associated with fibrin formation including vascular disorders, acut as deep venous thrombosis, arterial thrombosis, stroke, atherosclerosis, or septicaenia. The present sequence represents a tFVIIa peptide antagonist of the invention.
                                                                                     New peptide, useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, such as deep venous thrombosis, arterial thrombosis, and

The invention relates to peptide antagonists of tissue Factor VIIa (tFVIIa) and a method of inhibiting FVIIa activity by contacting FVIIa with the peptide in the presence of tissue factor and under conditions that allow binding of the compound to FVIIa to occur. The peptides are useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, such as deep venous thrombosis, arterial thrombosis, stroke, atherosclerosis, or septicaemia. The present sequence represents a tFVIIa peptide antagonist of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to peptide antagonists of tissue Factor VIIa (trVIIa) and a method of inhibiting FVIIa activity by contacting FVIIa with the peptide in the presence of tissue factor and under conditions that allow binding of the compound to FVIIa to occur. The peptides are useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, such as deep venous thrombosis, arterial thrombosis, stroke, atheroscierosis, or septicaemia. The present sequence represents a tFVIIa peptide antagonist of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New peptide, useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, such as deep venous thrombosis, arterial thrombosis, and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to peptides which act as antagonist of Factor VIIa (FVIIa). FVIIa is a trypsin-like serine protease blood coaquiation factor. FVIIa antagonist peptides are useful for inhibiting FVIIa activity in the presence of a tissue factor (TF) and for treating a activity in the presence of a tissue factor (TF) and for treating a TF/FVIIa mediated disease or disorder in a host. Diseases which can be treated include chronic thromobembolic diseases or disorders associated with fibrin formation including vascular disorders such as deep venous thrombosis, arterial thrombosis, stroke, tumour metastasis, thrombolysis, arterial thrombosis following angioplasty, acute and chronic indications such as inflammation, septic shock, septicaemia, hypotension, cardiopulmonary bypass surgery, hereditary angioedema, adult respiratory distantess syndrome (ARDS), disseminated intravascular coagulapathy (DIC) and other diseases like inflammatory disorders. The antagonist peptides are also useful in research, and for diagnostic, therapeutic and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New factor VIIa antagonist peptide for research, diagnostic, therapeutic and prophylactic methods, inhibits FVII/FVIIa mediated processes and blocks initial events of blood coagulation.
                                                                                                                                                                                                    Antagonist; factor VIIa; FVIIa; blood coagulation factor; inhibitor; chronic thromobembolic disease; fibrin formation; vascular disorder; deep vein thromobais; arterial thromobais; stroke; metastasis; thromobylysis; arteriosclerosis; restenosis; inflammation; septic shock; septicaemia; hypotension; angioedema; ARDS.

The method involves determining pest strain susceptible to the first toxin, selecting strain resistant to first toxin, and evaluating the efficacy of resistant strain with molecules to determine second toxin that is more toxic to resistant strain than to susceptible strain. The resistant and susceptible strain. The method is useful for evaluating the efficacy of molecule against a target population comprising pest strain resistant to first toxin, e.g. insect population of mammalian population, plant population, animal population, or wirus population. The efficacy of molecules to kill unwanted resistant virus population. The activation of factor X
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Evaluating the efficacy of molecule against target population including toxin-registant pest strain, by determining susceptible pest strain, selecting resistant strain, and evaluating efficacy of resistant strain with molecules.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention relates to peptides which act as antagonist of Factor VIIa (FVIIa). FVIIa is a trypsin-like serine protease blood coagulation factor. FVIIa antagonist peptides are useful for inhibiting FVIIa activity in the presence of a tissue factor (FF) and for treating a ctivity in the presence of a tissue factor (FF) and for treating a retivity in the presence of a tissue factor (FF) and for treating a retivity in the presence of a tissue factor (FF) and for treating a retivity in formation including vascular disorders such as deep venous thrombosis, arterial thrombosis stroke, tumour metaetasis, thrombolysis, arterial thrombosis following angioplasty, acute and chronic indications such as inflammation, septic shock, septicaemia, hypotension, cardiopulmonary bypass surgery, hereditary angioplasty, adult respiratory distress syndrome (ARDS), disseminated intravascular coagulapathy (DIC) and other diseases like inflammatory disorders. The antagonist peptides care also useful in research, and for diagnostic, therapeutic and prophylactic purposes. The present sequence represents a factor VIIa antagonist peptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New factor VIIa antagonist peptide for research, diagnostic, therapeutic and prophylactic methods, inhibits FVII/FVIIa mediated processes and blocks initial events of blood coagulation.
                                                                     Antagonist; factor VIIa; FVIIa; blood coagulation factor; inhibitor; chronic thromobembolic disease; fibrin formation; vascular disorder; deep vein thrombosis; arterial thrombosis; stroke; metastasis; thrombolysis; arteriosclerosis; restenosis; inflammation; septic shock;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Soyastatin N; scN; cystatin; negative cross resistance toxin; NCR;

toxic to resistant strain than to susceptible strain. The resistant and susceptible strains co-exist in the target population. The method is useful for evaluating the efficacy of molecule against a target population comprising pest strain resistant to first toxin, e.g. insect population, mammalian population, plant population, animal population, or virus population. The efficacy of molecules to kill unwanted resistant organisms is increased. Sequences ABR82336-49 represent A-series peptides that inhibit the activation of factor X
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to evaluating the efficacy of molecule against a target population including a pest strain resistant to first toxin. The method involves determining pest strain susceptible to the first toxin, selecting strain resistant to first toxin, and evaluating the efficacy of resistant strain with molecules to determine second toxin that is more.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Evaluating the efficacy of molecule against target population including toxin-resistant pest strain, by determining susceptible pest strain, selecting resistant strain, and evaluating efficacy of resistant strain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                      The invention relates to evaluating the efficacy of molecule against a target population including a pest strain resistant to first toxin. The method involves determining pest strain susceptible to the first toxin, selecting strain resistant to first toxin, and evaluating the efficacy of resistant strain with molecules to determine second toxin that is more toxic to resistant strain than to susceptible strain. The resistant and susceptible strains co-exist in the target population. The method is useful for evaluating the efficacy of molecule against a target population, mammalian population, plant population, and population, or virus population. The efficacy of molecules to kill unwanted resistant organisms is increased. Sequences ABR82336-49 represent A-series peptides that inhibit the activation of factor X
                                                                                                                                                                              Evaluating the efficacy of molecule against target population including toxin-resistant pest strain, by determining susceptible pest strain, selecting resistant strain, and evaluating efficacy of resistant strain with molecules.

The method involves determining pest strain susceptible to the first toxin, selecting strain resistant to first toxin, and evaluating the efficacy of resistant strain with molecules to determine second toxin that is more toxic to resistant strain than to susceptible strain. The resistant and susceptible strains co-exist in the target population. The method is useful for evaluating the efficacy of molecule against a target population comprising pest strain resistant to first toxin, e.g. insect population, mammalian population, plant population, animal population, or virus population. The efficacy of molecules to kill unwanted resistant organisms is increased. Sequences ABRR82336-49 represent A-series peptides that inhibit the activation of factor X

                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention relates to peptides which act as antagonist of Factor VIIa (FVIIa). FVIIa is a trypsin-like serine protease blood coaqulation factor. FVIIa antagonist peptides are useful for inhibiting FVIIa activity in the presence of a tissue factor (TF) and for treating a crivity in the presence of a tissue factor (TF) and for treating a TF/FVIIa mediated disease or disorder in a host. Diseases which can be treated include chronic thromobembolic diseases or disorders associated with fibrin formation including vascular disorders such as deep venous thrombosis, arterial thromobosis, stroke, tumour metastasis, thrombolysis, arteriosclerosis and restenosis following angioplasty, acute and chronic indications such as inflammation, septic shock, septicaemia, hypotenasion, cardiopulmonary bypass surgery, hereditary angioedema, adult respiratory distress syndrome (ARDS), disseminated intravascular coagulapathy (DIC) and other diseases like inflammatory disorders. The antagonist peptides are also useful in research, and for diagnostic, therapeutic and correct prophylactic purposes. The present sequence represents a factor VIIa antagonist peptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                        .

This invention relates to peptides which act as antagonist of Factor VIIa (FVIIa). FVIIa is a trypsin-like serine protease blood coagulation factor. FVIIa antagonist peptides are useful for inhibiting FVIIa activity in the presence of a tissue factor (FP) and for treating a crivity in the presence of a tissue factor (FP) and for treating a retrievable formation including vascular disorders such as thrombosis, arterial thrombosis, stroke, tumour metastasis, thrombolysis, arteriosclerosis and restenosis following angioplasty, acute and chronic indications such as inflammation, septic shock, septicaemia, hypotension, cardiopulmonary bypass surgery, hereditary angioedema, adult respiratory distress syndrome (ARDS), disseminated intravascular coagulapathy (DIC) and other diseases like inflammatory disorders. The antagonist peptides care also useful in research, and for diagnostic, therapeutic and prophylactic purposes. The present sequence represents a factor VIIa antagonist peptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention relates to peptides which act as antagonist of Factor VIIa (FVIIa). FVIIa is a trypsin-like serine protease blood coagulation factor. FVIIa antagonist peptides are useful for inhibiting FVIIa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New factor VIIa antagonist peptide for research, diagnostic, therapeutic and prophylactic methods, inhibits FVII/FVIIa mediated processes and blocks initial events of blood coagulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Antagonist, factor VIIa, FVIIa, blood coagulation factor; inhibitor; chronic thromboembolic disease; fibrin formation; vascular disorder; deep vein thrombosis; arterial thrombosis; stroke; metastasis; thrombolysis; arteriosclerosis; restenosis; inflammation; septic shock; septicaemia; hypotension; angioedema; ARDS.

activity in the presence of a tissue factor (TF) and for treating a TF/FVIIa mediated disease or disorder in a host. Diseases which can be recated include chronic thromboblic diseases or disorders associated with fibrin formation including vascular disorders such as deep venous thrombosis, arterial thrombosis, stroke, tumour metastasis, thrombolysis, arteriosclerosis and restenosis following angioplasty, acute and chronic indications such as inflammation, septic shock, septicaemia, hypotension, cardiopulmonary bypass surgery, hereditery angiocdema, adult respiratory distress syndrome (ARDS), disseminated intravascular coagulapathy (DIC) and other diseases like inflammatory disorders. The antagonist peptides are also useful in research, and for disquostic, therapeutic and prophylactic purposes. The present sequence represents a factor VIIa antagonist peptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (FVIIa). FVIIa is a trypsin-like serine protease blood coagulation actor. FVIIa antagonist peptides are useful for inhibiting FVIIa activity in the presence of a tissue factor (FF) and for treating a TF/FVIIa mediated disease or disorder in a host. Diseases which can be treated include chronic thromobembolic diseases or disorders associated with fibrain formation including vascular disorders such as deep venous thrombosis, arterial thrombosis, stroke, tumour metastasis, thrombolysis, arterial thrombosis following angioplasty, acute and chronic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention relates to peptides which act as antagonist of Factor VIIa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New factor VIIa antagonist peptide for research, diagnostic, therapeutic and prophylactic methods, inhibits FVII/FVIIa mediated processes and blocks initial events of blood coagulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Antagonist, factor VIIa, FVIIa, blood coagulation factor; inhibitor; chronic thromobembolic disease; fibrin formation; vascular disorder; deep vein thromobesis; arterial thromobesis; stroke; metastasis; thrombolysis; arteriosclerosis; restenosis; inflammation; septic shock; septicaemia; hypotension; angioedema; ARDS.
                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                           ö

This invention relates to peptides which act as antagonist of Factor VIIa (FVIIa). FVIIa is a trypsin-like serine protease blood coagulation care factor. FVIIa antagonist peptides are useful for inhibiting FVIIa activity in the presence of a tissue factor (TF) and for treating a cetivity in the presence of a tissue factor (TF) and for treating a created include chronic thrombobambolic diseases or disorders associated with fibrin formation including vascular disorders such as deep venous thrombosis, arterial thrombosis, stroke, tumour metastasis, thrombolysis, thrombosis, arterial thrombosis, stroke, tumour metastasis, thrombolysis, arterial thrombosis, stroke, tumour metastasis, thrombolysis, arteriosclerosis and restenosis following angioplasty, acute and chromic indications such as inflammation, septic shock, septicaemia, hypotension, cardiopulmonary bypass surgery, hereditary angioedema, adult respiratory distress syndrome (ARBS), disseminated intravascular coagulapathy (DIC) and other diseases like inflammatory disorders. The antagonist peptides are also useful in research, and for diagnostic, therapeutic and prophylactic purposes. The present sequence represent, a factor VIIa
                                                                                                                                                                                                                                                                ö
indications such as inflammation, septic shock, septicaemia, hypotension, cardiopulmonary bypass surgery, hereditary angioedema, adult respiratory distress syndrome (ARDS), disseminated intravascular coagulapathy (DIC) and other diseases like inflammatory discorders. The antagonist peptides are also useful in research, and for diagnostic, therapeutic and prophylactic purposes. The present sequence represents a factor VIIa antagonist peptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New factor VIIa antagonist peptide for research, diagnostic, therapeutic and prophylactic methods, inhibits FVII/FVIIa mediated processes and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Antagonist; factor VIIa; FVIIa; blood coagulation factor; inhibitor; chronic thromobembolic disease; fibrin formation; vascular disorder; deep vein thromobesis, arterial thromobesis; stroke; metastasis; thromobylysis; arteriosclerosis; restenosis; inflammation; septic shock; septicaemia; hypotension; angioedema; ARDS.
                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to peptides which act as antagonist of Factor VIIa (FVIIa). FVIIa is a trypsin-like serine protease blood coagulation factor. FVIIa antagonist peptides are useful for inhibiting FVIIa activity in the presence of a tissue factor (TF) and for treating a TF/FVIIa mediated disease or disorder in a host. Diseases which can be treated include chronic thromobembolic diseases or disorders associated with fibrin formation including vascular disorders such as deep venous thrombosis, arterial thrombosis, stroke, tumour metastasis, thrombolysis, arteriosclerosis and restenosis following angiophasty, acute and chronic indications such as inflammation, septic shock, septicaemia, hypotension, cardiopulmonary bypass surgery, hereditary angioedema, adult respiratory distress syndrome (ARDS), disseminated intravascular coagulapathy (DIC) and other diseases like inflammatory disorders. The antagonist peptides are also useful in research, and for disgnostic, therapeutic and
                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New factor VIIa antagonist peptide for research, diagnostic, therapeutic and prophylactic methods, inhibits FVII/FVIIa mediated processes and blocks initial events of blood coagulation.
                                                                                                                                                                                                                                                                                 Antagonist; factor VIIa; FVIIa; blood coagulation factor; inhibitor; chronic thromobembolic disease; fibrin formation; vascular disorder; deep vein thromobosis; arterial thromobesis; stroke; metastasis; thromobylysis; arteriosclerosis; restenosis; inflammation; septic shock; septicaemia; hypotension; angloedema; ARDS.
                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   prophylactic purposes. The present sequence represents a factor VIIa antagonist peptide of the invention
                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Score 89; DB 4; Length 24; Pred. further in the presence of a tissue factor (FVIIa). FVIIa is a trypsin-like serine protease blood coagulation factor. FVIIa antagonist peptides are useful for inhibiting FVIIa cetivity in the presence of a tissue factor (FF) and for treating a TF/FVIIA mediated disease or disorder. In a host. Diseases which can be treated include chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders such as deep venous thrombosis, arterial thrombosis, stroke, tumour metastasis, thrombolysis, arteriosclerosis and restenosis following angioplasty, acute and chronic indications such as inflammation, septic shock, septicaemia, hypotension, cardiopulmonary bypass surgery, hereditary angiosdema, adult respiratory, distress syndrome (ARDS), disseminated intravascular coagulapathy (DIC) and other diseases like inflammatory disorders. The antagonist peptides are also useful in research, and for diagnostic, therapeutic and crophylactic purposes. The present sequence represents a factor VIIa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention relates to peptides which act as antagonist of Factor VIIa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New factor VIIa antagonist peptide for research, diagnostic, therapeutic and prophylactic methods, inhibits FVII/FVIIa mediated processes and blocks initial events of blood coagulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Antagonist; factor VIIa; FVIIa; blood coagulation factor; inhibitor; chronic thromobembolic disease; fibrin formation; vascular disorder; deep vain thromobals; arterial thrombosis; stroke; metastasis; thrombolysis; arteriosclerosis; restenosis; inflammation; septic shock; septicaemia; hypotension; angioedema; ARDS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                            New peptide, useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, such as deep venous thrombosis, arterial thrombosis, and
                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to peptide antagonists of tissue Factor VIIa (tFVIIa) and a method of inhibiting FVIIa activity by contacting FVIIa with the peptide in the presence of tissue factor and under conditions that allow binding of the compound to FVIIa to occur. The peptides are useful for preventing or treating chronic thromboembolic diseases or such as deep venous thrombosis, arterial thrombosis, stroke, atherosclerosis, or septidesmia. The present sequence represents a tFVIIa peptide antagonist of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Antagonist; factor VIIa; FVIIa; blood coagulation factor; inhibitor; chronic thromobembolic disease; fibrin formation; vascular disorder; deep vein thrombosis; arterial thrombosis; stroke; metastasis; thrombolysis; arterioselerosis; restenosis; inflammation; septic shock;

(FVIIA). FVIIA is a trypsin-like serine protease blood cogulation factor. FVIIA antagonist peptides are useful for inhibiting FVIIA activity in the presence of a tissue factor (TP) and for treating a TP/FVIIA mediated disease or disorder in a host. Diseases which can be treated include chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders such as deep venous thrombosis, arterial thrombosis, stroke, tumour metastasis, thrombolysis, arterial thrombosis, septic, septic, septicaemia, hypotension, cardiopulmonary bypass surgery, hereditary angioplasty, acute and chronic indications such as inflammation, septic shock, septicaemia, hypotension, distress syndrome (ARDS), disseminated intravascular coagulapathy (DIC) and other diseases like inflammatory disorders. The antagonist peptides are also useful in research, and for disagnostic, therapeutic and prophylactic purposes. The present sequence represents a factor VIIa antagonist peptide of the invention
                                                                                                                                                                                                                                                                                                                     This invention relates to peptides which act as antagonist of Factor VIIa
                                                                       New factor VIIa antagonist peptide for research, diagnostic, therapeutic and prophylactic methods, inhibits FVII/FVIIa mediated processes and blocks initial events of blood coagulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                tissue Factor VIIa; tFVIIa; chronic thromboembolic disease; fibrin formation; vascular disorders; deep venous thrombosis; arterial thrombosis; stroke; atherosclerosis; septicaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Length 24;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0; Indels

                                                                                                                                                                                          ଚ
                                                                                                                                                                                                                                                                                                                               6
                                                                                                                                                                           The invention relates to peptide antagonists of tissue Factor VIIa (tFVIIa) and a method of inhibiting FVIIa activity by contacting FVIIa with the peptide in the presence of tissue factor and under conditions that allow binding of the compound to FVIIa to occur. The peptides are useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, such as deep venous thrombosis, arterial thrombosis, stroke, atherosclerosis, or septicaemia. The present sequence represents a tFVIIa peptide antagonist of the invention.

The invention relates to peptide antagonists of tissue Factor VIIa (tFVIIa) and a method of inhibiting FVIIa activity by contacting FVIIa with the peptide in the presence of tissue factor and under conditions that allow binding of the compound to FVIIa to occur. The peptides are useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, such as deep venous thrombosis, arterial thrombosis, stroke, atherosclerosis, or septicaemia. The present sequence represents a tFVIIa peptide antagonist of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       VIIa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention relates to peptides which act as antagonist of Factor VIIa factor. FVIIa, is a trypsin-like serine protease blood coagulation factor. FVIIa antagonist peptides are useful for inhibiting FVIIa activity in the presence of a tissue factor (TF) and for treating a TF/FVIIa mediated disease or disorder in a host. Diseases which can be treated infolde chronic thromobenboic diseases or disorders associated with fibrin formation including vascular disorders such as deep venous thrombosis, arterial thrombosis, stroke, tumour metastasis, thrombolysis, atteriosclarosis and restences of and chronic indications such as inflammation, septic shock, septicaemia, hypotension, cardiopulmonary bypass surgery, hereditary angloedema, adult respiratory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New factor VIIa antagonist peptide for research, diagnostic, therapeutic and prophylactic methods, inhibits FVII/FVIIa mediated processes and blocks initial events of blood coagulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Antagonist, factor VIIa, FVIIa, blood coagulation factor, inhibitor, chronic thromobembolic disease, fibrin formation, vascular disorder; deep vein thrombosis, arterial thrombosis, stroke, metastasis; thrombolysis, arterioselerosis, restenosis, inflammation, septic shock; septicaemia, hypotension, angioedema, ARDS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Length 15;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (FVIIa) antagonist peptide SEQ ID 43.

                                                                                                                                                                                                                    This invention relates to peptides which act as antagonist of Factor VIIa (FVIIa). FVIIa is a trypsin-like serine protease blood coagulation activity in the presence of a tissue factor (FF) and for inhibiting FVIIa activity in the presence of a tissue factor (FF) and for treating a reful for an expension of a tissue factor (FF) and for treating a FF/FVIIA mediated disease or disorder in a host. Disease which can be treated include chronic thromobembolic diseases or disorders associated with fibrin formation including vascular disorders such as deep venous thrombosis, arterial thromobosis, stroke, tumour metastasis, thrombolysis, arteriosclerosis and restenosis following angioplasty, acute and chronic indications and na filammation, septic shock, septicaemia, hypotension, cardiopulmonary bypass surgery, hereditary angioedema, adult respiratory distress syndrome (ARDS), disseminated intravascular coagulapathy (DIC) and other diseases like inflammatory disorders. The antagonist peptides are also useful in research, and for diagnostic, therapeutic and prophylactic purposes. The present sequence represents a factor VIIa antagonist peptide of the invention
                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New factor VIIa antagonist peptide for research, diagnostic, therapeutic and prophylactic methods, inhibits FVII/FVIIa mediated processes and
distress syndrome (ARDS), disseminated intravascular coagulapathy (DIC) and other diseases like inflammatory disorders. The antagonist peptides are also useful in research, and for diagnostic, therapeutic and prophylactic purposes. The present sequence represents a factor VIIa antagonist peptide of the invention

This invention relates to peptides which act as antagonist of Factor VIIa (FVIIa). FVIIa is a trypsin-like serine protease blood coagulation actorist. FVIIa antagonist peptides are useful for inhibiting FVIIa activity in the presence of a tissue factor (TF) and for treating a ctivity in the presence of a tissue factor. (TF) and for treating a retadiated disease or disorder in a host. Diseases which can be treated include chronic thromobembolic diseases or disorders associated with fibrin formation including vascular disorders such as edeep venous chrombosis, arterial thrombosis, erroke, tumour metaatasis, thrombolysis, arteriosclerosis and restenosis following angioplasty, acute and chronic indications such as inflammation, septic shock, septicaemia, hypotension, cardiopulmonary bypass surgery, hereditary angioedema, adult respiratory distress syndrome (ARDS), disseminated intravascular coagulapathy (DIC) and other diseases like inflammatory discress. The antagonist peptides are also useful in research, and for diagnostic, therapeutic and corpus antagonist peptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
New factor VIIa antagonist peptide for research, diagnostic, therapeutic and prophylactic methods, inhibits FVII/FVIIa mediated processes and blocks initial events of blood coagulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            96.6%; Score 86; DB 4; Length 13; 92.3%; Pred. New peptide, useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, such as deep venous thrombosis, arterial thrombosis, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to peptide antagonists of tissue Factor VIIa (tFVIIa) and a method of inhibiting FVIIa activity by contacting FVIIa with the peptide in the presence of tissue factor and under conditions that allow binding of the compound to FVIIa to occur. The peptides are useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, such as deep venous thrombosis, arterial thrombosis, stroke, atherosclerosis, or septicasmia. The present sequence represents a tFVIIa peptide antagonist of the invention.
tissue Factor VIIa; tFVIIa; chronic thromboembolic disease; fibrin formation; vascular disorders; deep venous thrombosis; arterial thrombosis; stroke; atherosclerosis; septicaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 tissue Factor VIIa; tFVIIa; chronic thromboembolic disease; fibrin formation; vascular disorders; deep venous thrombosis; arterial thrombosis; stroke; atherosclerosis; septicaemia.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to peptide antagonists of tissue Factor VIIa (tFVIIa) and a method of inhibiting FVIIa activity by contacting FVIIa with the peptide in the presence of tissue factor and under conditions that allow binding of the compound to FVIIa to occur. The peptides are useful for preventing or treating chronic thromboembolic diseases or each as associated with fibrin formation including vascular disorders, atheroaclerosis, or septicaemia. The present sequence represents a tFVIIa peptide antagonist of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New peptide, useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, such as deep venous thrombosis, arterial thrombosis, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

                                                                                                                                                                                                                                                                                   ö
                                                                                                                             The invention relates to peptide antagonists of tissue Factor VIIa (tFVIIa) and a method of inhibiting FVIIa activity by contacting FVIIa with the peptide in the presence of tissue factor and under conditions that allow binding of the compound to FVIIa to occur. The peptides are useful for preventing or treating chronic thromboembolic diseases or such as associated with fibrin formation including vascular disorders, atheroaclerosis, or septicaemia. The present sequence represents a tFVIIa peptide antagonist of the invention.
                                                     New peptide, useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, such as deep venous thrombosis, arterial thrombosis, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention relates to peptides which act as antagonist of Factor VIIa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New factor VIIa antagonist peptide for research, diagnostic, therapeutic and prophylactic methods, inhibits FVII/FVIIa mediated processes and blocks initial events of blood coagulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Antagonist, factor VIIa, FVIIa, blood coagulation factor; inhibitor; chronic thromobembolic disease, fibrin formation; vascular disorder; deep vein thrombosis; arterial thrombosis; stroke; metastasis; thrombolysis, arteriosclerosis; restenosis; inflammation; septic shock; septicaemia; hypotension; angioedema; ARDS.
                                                                                                                                                                                                                                                                                   Gaps

FVIIa is a trypsin-like serine protease blood coagulation factor. FVIIa antagonist peptides are useful for inhibiting FVIIa activity in the presence of a tissue factor (FF) and for treating a TF/FVIIa mediated disease or disorder in a host. Diseases which can be treated include chronic thromobembolic diseases or disorders associated with fibrin formation including vascular disorders such as deep venous
factor. FVII antagonist peptides are useful for inhibiting FVII activity in the presence of a tissue factor (TF) and for treating a tryfyrII anddated disease or disorder in a host. Diseases which can be treated include chronic thrombosholic diseases or disorders associated with fibrin formation including vascular disorders such as deep venous thrombosis, arterial thrombosis, stroke, tumour metastasis, thrombolysis, arteriosclerosis and restenois following angioplasty, acute and chronic indications such as inflammation, septic shock, septicaemia, hypotension, cardiopulmonary bypass surgery, hereditary angloedema, adult respiratory distress syndrome (ARDS), disseminated intravascular coaquiapathy (DIC) and other diseases like inflammatory disorders. The antagonist peptides are also useful in research, and for diagnostic, therapoutic and the arterior of the coaquiactory distress are also useful in research.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                diagnostic, therapeutic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Antagonist; factor VIIa; FVIIa; blood coagulation factor; inhibitor; chromoter thromobembolic disease; fibrin formation; vascular disorder; depp vein thromobems; arterial thrombosis; arterial thrombosis; broke; metastasis; thrombolysis; arteriosclerosis; restenosis; inflammation; septic shock;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New factor VIIa antagonist peptide for research, diagnostic, theraper and prophylactic methods, inhibits FVII/FVIIa mediated processes and blocks initial events of blood coagulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   prophylactic purposes. The present sequence represents a factor VIIa antagonist peptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                96.6%; Score 86; DB 4; Length 24; 92.3%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention relates to peptides which act as antagonist of Factor VIIa (FVIIa). FVIIa is a trypsin-like serine protease blood coagulation actor. FVIIa intragonist peptides are useful for inhibiting FVIIa activity in the presence of a tissue factor (FF) and for treating a FF/FVIIA mediated disease or disorder in a host. Diseases which can be treated include chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders such as deep venous thrombosis, arterial thrombosis, stroke, tumour metastasis, thrombolysis, arteriosclerosis and restenosis following angioplasty, acute and chronic indications such as inflammation, septic shock, septicaemia, hypotension, cardiopulmonary bypass surgery, hereditary angioedema, adult respiratory distress syndrome (ARDS), disseminated intravascular coagulapathy (DIC) and other diseases like inflammatory disorders. The antagonist peptides
thrombosis, arterial thrombosis, stroke, tumour metastasis, thrombolysis, arteriosclerosis and restenosis following angloplasty, acute and chronic indications such as inflammation, septic shock, septicaemia, hypotension, cardiopulmonary bypass surgery, hereditary angloedema, adult respiratory distress syndrome (ARDS), disseminated intravascular coagulapathy (DIC) and other diseases like inflammatory disorders. The antagonist peptides are also useful in research, and for disgnostic, therapeutic and prophylactic purposes. The present sequence represents a factor VIIa antagonist peptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New factor VIIa antagonist peptide for research, diagnostic, therapeutic and prophylactic methods, inhibits FVII/FVIIa mediated processes and blocks initial events of blood coagulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Antagonist, factor VIIa, FVIIa, blood coagulation factor; inhibitor; chronic thromobembolic disease; fibrin formation; vaccular disorder; deep vein thromobosis; arterial thromobosis; stroke; metastasis; thrombolysis; arteriosclerosis; restenosis; inflammation; septic shock; septicaemia; hypotension; angioedema; ARDS.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to peptide antagonists of tissue Factor VIIa (tFVIIa) and a method of inhibiting FVIIa activity by contacting FVIIa with the peptide in the presence of tissue factor and under conditions that allow binding of the compound to FVIIa to occur. The peptides are useful for preventing or treating chronic thromboembolic diseases or such as deep venous thrombosis, arterial thrombosis, stroke, atheroscierosis, or septicaemia. The present sequence represents a FVIIa peptide antagonist of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New peptide, useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, such as deep venous thrombosis, arterial thrombosis, and
                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
are also useful in research, and for diagnostic, therapeutic and prophylactic purposes. The present sequence represents a factor VIIa antagonist peptide of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention relates to peptides which act as antagonist of Factor VIIa (FVIIa). FVIIa is a trypsin-like serine protease blood coagulation factor. FVIIa antagonist peptides are useful for inhibiting FVIIa activity in the presence of a tissue factor (TF) and for treating a TF/FVIIa mediated disease or disorder in a host. Diseases which can be treated include chronic thromobembolic diseases or disorders associated with fibrin formation including vascular disorders such as deep venous thrombosis, arterial thrombosis, stroke, tumour metastasis, thrombolysis, arteriosclerosis and restenosis following angioplasty, acute and chronic articopulmonary bypass surgery, hereditary angioedema, adult respiratory distress syndrome (ARDS), disseminated intravascular coagulapathy (DIC)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New factor VIIa antagonist peptide for research, diagnostic, therapeutic and prophylactic methods, inhibits FVII/FVIIa mediated processes and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          and other diseases like inflammatory disorders. The antagonist peptides are also useful in research, and for diagnostic, therapeutic and prophylactic purposes. The present sequence represents a factor VIIa antagonist peptide of the invention

The invention relates to evaluating the efficacy of molecule against a target population including a pest strain resistant to first toxin. The method involves determining pest strain susceptible to the first toxin, selecting strain resistant to first toxin, and evaluating the efficacy of resistant strain with molecules to determine second toxin that is more toxic to resistant strain than to susceptible strain. The resistant and susceptible strain. The method is useful for evaluating the efficacy of molecule against a target population comprising pest strain resistant to first toxin, e.g. insect population, mammalian population, plant population, animal population, or virus population. The efficacy of molecules to kill unwanted resistant virus population. The efficacy of molecules to kill unwanted resistant that inhibit the activation of factor X

The invention relates to peptide antagonists of tissue Factor VIIa (tFVIIa) and a method of inhibiting FVIIa activity by contacting FVIIa with the peptide in the presence of tissue factor and under conditions that allow binding of the compound to FVIIa to occur. The peptides are useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, such as deep venous thrombosis, arterial thrombosis, stroke, atherosclerosis, or septicaemia. The present sequence represents a tFVIIa peptide antagonist of the invention.
                                                  New peptide, useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, such as deep venous thrombosis, arterial thrombosis, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          including vascular rombosis, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to peptide antagonists of tissue Factor VIIa (tFVIIa) and a method of inhibiting FVIIa activity by contacting FVIIa with the peptide in the presence of tissue factor and under conditions that allow binding of the compound to FVIIa to occur.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to peptide antagonists of tissue Factor VIIa (tFVIIa) and a method of inhibiting FVIIa activity by contacting FVIIa with the peptide in the presence of tissue factor and under conditions that allow binding of the compound to FVIIa to occur. The peptides are useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, such as deep venous thrombosis, arterial thrombosis, stroke, atherosclerosis, or septicaemia. The present sequence represents a tFVIIa peptide antagonist of the invention.
                                                                                                                                                                                                                                                                                                                                                                               New peptide, useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, such as deep venous thrombosis, arterial thrombosis, and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New peptide, useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, such as deep venous thrombosis, arterial thrombosis, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to peptide antagonists of tissue Factor VIIa (tFVIIa) and a method of inhibiting FVIIa activity by contacting FVIIa with the peptide in the presence of tissue factor and under conditions that allow binding of the compound to FVIIa to occur. The peptides are useful for preventing of the compound to FVIIa to occur. The peptides are useful for preventing of treating chronic thromboembolic diseases or such as deep venous thrombosis, atterial thromboembolis, stroke, atherosclerosis, or septicaemia. The present sequence represents a tFVIIa peptide antagonist of the invention.
                   such as deep venous thrombosis, arterial thrombosis, stroke, atherosclerosis, or septicaemia. The present sequence represents a tFVIIa peptide antagonist of the invention.

New peptide, useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, such as deep venous thrombosis, arterial thrombosis, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to peptide antagonists of tissue Factor VIIa (tFVIIa) and a method of inhibiting FVIIa activity by contacting FVIIa with the peptide in the presence of tissue factor and under conditions that allow binding of the compound to FVIIa to occur. The peptides are useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, such as deep venous thrombosis, arterial thrombosis, stroke, atherosclerosis, or septicaemia. The present sequence represents a tFVIIa peptide antagonist of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                tissue Factor VIIa; tFVIIa; chronic thromboembolic disease; fibrin formation; vascular disorders; deep venous thrombosis; arterial thrombosis; stroke; atherosclerosis; septicaemia.

New peptide, useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, such as deep venous thrombosis, arterial thrombosis, and
                                                                                                                                                      The invention relates to peptide antagonists of tissue Factor VIIa (tFVIIa) and a method of inhibiting FVIIa activity by contacting FVIIa with the peptide in the presence of tissue factor and under conditions that allow binding of the compound to FVIIa to occur. The peptides are useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, such as deep venous thrombosis, arterial thrombosis, stroke, atherosclerosis, or septicaemia. The present sequence represents a tFVIIa peptide antagonist of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention relates to peptides which act as antagonist of Factor VIIa (FVIIa). FVIIa is a trypsin-like scrine protease blood coagulation factor. FVIIa antagonist peptides are useful for inhibiting FVIIa activity in the presence of a tissue factor (FF) and for treating a TF/FVIIa mediated disease or disorder in a host. Diseases which can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New factor VIIa antagonist peptide for research, diagnostic, therapeutic and prophylactic methods, inhibits FVII/FVIIa mediated processes and blocks initial events of blood coagulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Antagonist, factor VIIa, FVIIa, blood coagulation factor, inhibitor, chronic thromobembolic disease, fibrin formation, vascular disorder, deep vein thrombosis, arterial thrombosis, stroke, metastasis, thrombolysis, arteriosclerosis, restenosis, inflammation, septic shock,

                                                                                                                                                                                                                                                                                                                                  New peptide, useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, such as deep venous thrombosis, arterial thrombosis, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to peptide antagonists of tissue Factor VIIa (tFVIIa) and a method of inhibiting FVIIa activity by contacting FVIIa with the peptide in the presence of tissue factor and under conditions that allow binding of the compound to FVIIa to occur. The peptides are useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, acherosclerosis, or septicaenia. The present sequence represents a tFVIIa peptide antagonist of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention relates to peptides which act as antagonist of Factor VIIa factor. FVIIa is a trypsin-like serine protease blood coagulation factor. FVIIa antagonist peptides are useful for inhibiting FVIIa activity in the presence of a tissue factor (FF) and for treating a TF/FVIIa mediated disease or disorder in a host. Diseases which can be treated include chronic thrombombolic diseases or disorders associated with fibrin formation including vascular disorders such as deep venous thrombosis, arterial thrombosis, stroke, tumour metastasis, thrombolysis, arterioscierosis and restenois following angioplasty, acute and chronic indications such as inflammation, septic shock, septicaemia, hypotension, cardiopulmonary bypass surgery, hereditary angloedema, adult respiratory
treated include chronic thromobembolic diseases or disorders associated with fibrin formation including vascular disorders such as deep venous thrombosis, arterial thrombosis, tumour metastessis, thrombolysis, arteriosclerosis and restenosis following angioplasty, acute and chronic indications such as inflammatio, septic shock, septicaemia, hypotension, cardiopulmonary bypass surgery, hereditary angioedema, adult respiratory distress syndrome (ARDS), disseminated intravascular coagulapathy (DIC) and other diseases like inflammatory disorders. The antagonist peptides are also useful in research, and for diagnostic, therapeutic and prophylactic purposes. The present sequence represents a factor VIIa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New factor VIIa antagonist peptide for research, diagnostic, therapeutic and prophylactic methods, inhibits FVII/FVIIa mediated processes and blocks initial events of blood coagulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Antagonist; factor VIIa; FVIIa; blood coagulation factor; inhibitor; chtonic thromobembolic disease; fibrin formation; vascular disorder; deep vein thromobesis; thromobesis; stroke; metastasis; thromoblysis; arteriosclerosis; restenosis; inflammation; septic shock; septicaemia; hypotension; angioedema; ARDS.

```
This invention relates to peptides which act as antagonist of Factor VIIa (FVIIa). FVIIa is a trypsin-like serine protease blood coagulation at factor. FVIIa antagonist peptides are useful for inhibiting FVIIa a factor. FVIIa antagonist peptides are useful for inhibiting FVIIa activity in the presence of a tissue factor (TF) and for treating a TF/FVIIa mediated disease of disorder in a host. Diseases which can be treated include chronic thromobembolic diseases or disorders associated with fibrin formation including vascular disorders such as ease thrombosis, arterial thrombosis, stroke, tumour metastasis, thrombolysis, arteriosclerosis and restenosis following angioplasty, acute and chronic indications such as inflammation, septic shock, septicaemia, hypotension, cardiopulmonary bypass surgery, hereditary angioedema, adult respiratory distress syndrome (ARDS), disseminated intravascular coagulapathy (DIC) and other diseases like inflammatory disorders. The antagonist peptides are also useful in research, and for diagnostic, therapeutic and prophylactic purposes. The present sequence represents a factor VIIa antagonist peptide of the invention
                                                                                                                                                                                                       ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New factor VIIa antagonist peptide for research, diagnostic, therapeutic and prophylactic methods, inhibits FVII/FVIIa mediated processes and blocks initial events of blood coagulation.
distress syndrome (ARDS), disseminated intravascular coagulapathy (DIC) and other diseases like inflammatory disorders. The antagonist peptides are also useful in research, and for diagnostic, therapeutic and prophylactic purposes. The present sequence represents a factor VIIa antagonist peptide of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention relates to peptides which act as antagonist of Factor VIIa factor. FVIIa antagonist-like serine protease blood coagulation factor. FVIIa antagonist peptides are useful for inhibiting FVIIa activity in the presence of a tissue factor (TF) and for treating a TF/FVIIa mediated disease or disorder in a host. Diseases which can be treated include chronic thromobembolic diseases or disorders associated with fibrin formation including vascular disorders such as deep venous thrombosis, arterial thrombosis, stroke, tumour metastasis, thrombolysis, arteriosclerosis and restenois following angioplasty, acute and chronic indications such as inflammation, septic shock, septicaemia, hypotension, cardiopulmonary bypass surgery, hereditary angloedema, adult respiratory distress syndrome (ARDS), disseminated intravascular coagulapathy (DIC) and other diseases like inflammatory disorders. The antagonist peptides are also useful in research, and for diagnostic, therapeutic and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New factor VIIa antagonist peptide for research, diagnostic, therapeutic and prophylactic methods, inhibits FVII/FVIIa mediated processes and blocks initial events of blood coagulation.
                                                                                                                                                                                                                                                                  Antagonist, factor VIIa, FVIIa, blood coagulation factor; inhibitor; chronic thromobembolic disease; fibrin formation; vascular disorder; deep vein thromobesis, arterial thromobesis, stroke; metastasis; thrombolysis, arteriosclerosis; restenosis; inflammation; septic shock; septicaemia; hypotension; angloedema; ARDS.

This invention relates to peptides which act as antagonist of Factor VIIa (FVIIa). FVIIa is a trypsin-like serine protease blood coagulation antagonist peptides are useful for inhibiting FVIIa antagonist peptides are useful for inhibiting FVIIa activity in the presence of a tissue factor (TF) and for treating a crisical include chronic thrombombolic diseases or disorders associated with fibrin formation including vascular disorders such as deep venous thrombosis, arterial thrombosis, stroke, tumour metastasis, thrombolysis, thrombosis, arterial thrombosis, following angioplasty, acute and chronic indications such as inflammation, septic shock, septicaemia, hypotension, cardiopulmonary bypass surgery, hereditary angioedema, adult respiratory distress syndrome (ARDS), disseminated intravascular coagulapathy (DIC) and other diseases like inflammatory disorders. The antagonist peptides are also useful in research, and for diagnostic, therapeutic and prophlactic purposes. The present sequence represents a factor VIIa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New factor VIIa antagonist peptide for research, diagnostic, therapeutic and prophylactic methods, inhibits FVII/FVIIa mediated processes and blocks initial events of blood coagulation.
                                                                                                                                                                                                                                                                                                                                                                                                                               Antagonist; factor VIIa; FVIIa; blood coagulation factor; inhibitor; chronic thromobembolic disease; fibrin formation; vascular disorder; deep vain thromobais, arterial thrombosis; erroke; metastasis; thrombolysis; arteriosclerosis; restenosis; inflammation; septic shock; septicaemia; hypotension; angioedema; ARDS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ;
